

# HID® ArcID™ Identity Management Software

## Identity Record Management Software for Biometric Enrollment Solutions

HID ArcID Identity Management is a web-based software module in the ArcID software platform that evaluates, stores, manages, and verifies identity records. ArcID Identity Management processes and stores the enrollment of biometric and biographic information based on the enrollment datasets provided and utilizes adjudication to match newly enrolled applicants to the existing database.

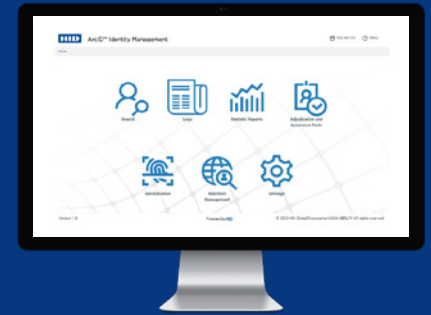

Once biometric and biographic records have been entered into a database, the application allows the management of these records, including the ability to search, view, update and delete. Adjudication functionality, which is required for biometric identity matching and deduping purposes, is integrated into the Identity Management module.

The software optionally supports the creation of watchlists and the

associated Watchlist Synchronization XML (WSX) files, which can be exported for use as local matching databases on mobile devices. HID offers IDTrak, a small AFIS, for enrollment and matching — or integration with traditional AFIS vendors to meet your needs.

ArcID Portal is a web-based software module included with Identity Management; both can be deployed on-premise or in the cloud. ArcID Portal is the central administrative interface from which users and roles are managed, licensing status is obtained, and customized dashboards are displayed providing a snapshot of activities and trends.

ArcID Identity Management server software is an ArcID suite module that works together with other modules to deliver flexibility and configurability for your organization's biometric identity solution.

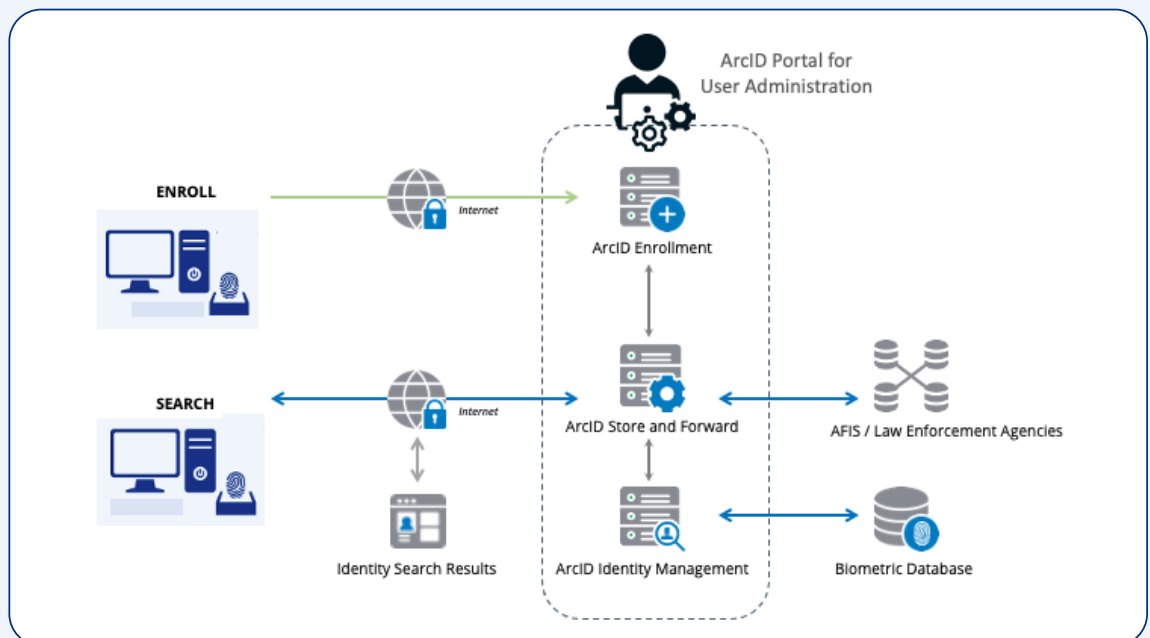

### **BENEFITS:**

- Flexible user experience improves decision making
- Ability to create and maintain multiple custom watchlists
- Capable of linking identities between multiple databases (biometric and/or biographic)
- Configurable for your organization's needs to support deduplication and adjudication
- Ease of integration to existing applications and ArcID solution platform to save time

	SPECIFICATIONS
<b>Product Name</b>	HID ArcID Identity Management
<b>Application Server Hardware Requirements</b>	<ul style="list-style-type: none"> <li>• 5th generation Intel® Xeon® processor (64-bit) or later</li> <li>• 2 processors (minimum 4 cores each)</li> <li>• 32 GB RAM memory minimum</li> <li>• 160 GB available disk space minimum</li> </ul>
<b>Application Server Software Requirements</b>	<ul style="list-style-type: none"> <li>• Windows Server 2016 or 2019 operating system (English language version)</li> <li>• Internet Information Server Version 10 or later</li> <li>• Microsoft .NET Framework Version 4.5 or later</li> <li>• Active Directory (if applicable): application server must be within the same domain</li> </ul>
<b>Database Server Hardware Requirements</b>	<ul style="list-style-type: none"> <li>• 5th generation Intel® Xeon® processor (64-bit) or later</li> <li>• 2 processors (minimum 4 cores each)</li> <li>• 32 GB RAM memory minimum</li> <li>• 160 GB available disk space minimum</li> </ul> <p>Available disk space will vary depending upon the data storage requirements for identity records (including biographic, photographic, biometric and other data). Contact your HID representative for more information and to determine required disk space.</p>
<b>Database Server Software Requirements</b>	<ul style="list-style-type: none"> <li>• Microsoft SQL Server 2016/2017/2019 (Standard or Enterprise)</li> <li>• For Standard edition, a minimum of 2 CALs are required</li> <li>• For Enterprise edition, licensing is required of all configured cores (physical or logical)</li> <li>• When using SQL Server, the security must be installed with either SQL authentication or mixed mode configuration</li> <li>• A dedicated SQL Server instance is recommended. Contact your HID representative for further recommendations.</li> </ul>
<b>Supported Browsers</b>	<ul style="list-style-type: none"> <li>• Microsoft Edge Version 79.0.309 or later</li> <li>• Google Chrome Version 20 or later</li> <li>• The application must be a trusted site for the local domain or internet policy</li> <li>• Cookies must be enabled for proper usage</li> </ul>
